TABET ENTREPRISES S.A.L

TABET ENTREPRISES S.A.L

Presentation:

TABET GROUP started off in West Africa in 1946. Led by Mr. Antoine TABET, the Group expanded its operation in different continents.

Throughout the years the group gained notoriety by achieving major projects that contributed substantially to the economic and social development of many countries and mainly in the Western African countries.

Our scope of interest is into the civil engineering works and turnkey projects.

In 1966 Antoine Tabet paved the way for the French company Bouygues Construction into Africa, and became the representative of Bouygues in Senegal. Originally he built up his company by concentrating his energies on the finance and execution of a number of industrial, public works and infrastructure projects in Africa.

Tabet was not to be contained in Africa. The 1980's saw the birth of Tabet Group of Companies beginning with the creation of the Belgium based general contracting company ILPA, in which Tabet is a major shareholder. This facilitated the diversification of Tabet Group into the construction of "turnkey "and special design projects. ILPA as part of Tabet Group carved in niche for itself in the hospital sector and won bids to design, build and finance hospitals in the Middle East.

The key to the success of the Group has been careful planning and forward thinking. Each new project is carefully studied and is independent of any other ongoing ventures at the time, thus minimizing the risk to the Group as a whole.

Our strategy is simple: assess the situation, assess the risk, assess the viability and aggressively go for our target.

For more information, please visit our website:

TABET ENTREPRISES S.A.L

Scope of Work:

I. Building Works

- Residential Buildings: from low cost housing to luxurious residential Villas and Buildings with the aim of budget and time performance

- Hospitals: our hospitals are part of our special design/turnkey projects. They are built to satisfy international standards, serve their functional purpose yet maintain an aesthetic appearance to fit into their surroundings.

- Office Centers and Shops: the Center in Hazmieh, Lebanon, is the heart of our operations. This Office Center houses different businesses including a bank.

- Paper paste factory: the first of its kind in Africa, this paper paste factory, Cellucam, represents a technical achievement never seen before in the area.

- Grain Silo: built in Pointe-noire, Congo, this grain silo was part of a mill and fodder project with a production rate of 250 tons per day.

II. Civil works branched to several categories:

- Roads: our extensive experience in road construction began in Congo (Brazzaville). This has enabled us to take on projects in other developing nations;

- Bridges: the technical specifications present in bridge building are a challenge that our team of expert engineers have readily met. Our bridges are built to withstand the test of time. Only the best materials and techniques are used to ensure the safety and longevity of the final product.

-Dams: we are have built gravity dams in The Ivory Coast and irrigation water ponds in Lebanon.

-**Infrastructure:** Amwaj, man-made islands, Bahrain, We have undertaken the immense task of providing the infrastructure for this 3 million square meter paradise. The Amwaj project consists of four islands (land fill) joined together to form a world of dreams.

PROJECTS IN LEBANON

LIV SAIFI PROJECT – LOT 1106

Location:	Saifi – Lebanon
